

Requirements:

- Use a Node and Express Web Server;
- Be backed by a MySQL Database and an ORM (not necessarily Sequelize);
- Have both GET and POST routes for retrieving and adding new data;
- Be deployed using Heroku (with Data);
- Utilize at least one new library, package, or technology that we haven't discussed;
- Have a polished frontend / UI;
- Have folder structure that meets MVC Paradigm;
- Meet good quality coding standards (indentation, scoping, naming);
- Must not expose sensitive API key information on the server;
